

# SeaSight

## CITIZEN SCIENCE

- Currently developing a citizen science project for members of the public, wildlife charities and MMO coastal teams to report marine Non-Licensable Activities (mNLA) and wildlife disturbance events.
- Data collected will support our site assessments on mNLA activity in MPAs and help to conclude if management measures are needed.
- Will be available through an online webform supported by CLUE software.
- Beginning with a soft launch through a three-year pilot study before becoming publicly available.
- Form will be undergoing internal checks this week before hopefully soft launching first week of May.

...ambitious for our seas and coasts
